IPCamClient quick installation guide

1 Hardware installation

1.1 Open the package and take the ipcam and accessories out, First install the ipcam wireless antenna

1.2 Fix the ip camera, insert one end of the network cable to the camera tail Ethernet card interface, on the other end of the network interface connected to a router or switch.

1.3 The software of IP Camera support windows xp/windows8/windows7 etc. operation system, Pls use the power adapter to connect the DC5V port on the back of the ip camera. Plug the other end to an electrical outlet. Check the card's power indicator light (yellow) and the network indicator (green) is working properly, the camera pan and tilt rotate automatically.

1.4:Please incert CD into your computer's CD-ROM drive,, pls double click the "IPCamClient" ,the file can be opened.

NOTE: This Ipclient software matches with all this supplier's MPJEG&H.264 IP cameras.

Before installation, pls kindly turn off the firewall and Antivirus software of the computer connected, so that this software can be installed completely and successfully. Pls don't worried, it's safe and won't bring any problem to your computer.

After installation, If there is clue for restarting the computer, please just do it, then you can use the IPClient software.

Click next → Click Complete →Click next → Install→Finish
